# Increase in the duration of treatment in terms of the median of an annual volume

# Living at the moment of (conditionally) termination

	Intramural	Extramural	Institute	On own	Total
<b>Conditional termination</b>	1	4	6	11	22
<b>Termination</b>	7	1	6	6	20
<b>Years 02-05</b>	19,0%	11,9%	28,6%	40,5%	42
<b>Conditional termination</b>	7	7	5	15	34
<b>Termination</b>	12	3	4	5	24
<b>Years 09-11</b>	32,8%	17,2%	15,5%	34,5%	58

# Related to the riskfactors '9 of Hildebrand'

Loc.\Hild	3	6	9	12	15	18	21	Total
Intramural		1	3	6	2	4	3	19
Extramural	3	3	2		1	1		10
Institute		1	1	6			1	9
On own	9	5	2	2		2		20
Total	12	10	8	14	3	7	4	58

# Angle of incidence of the concept of focus on results

- Diffuse goals into 'measurable' results, we use the dynamic risk factors, protective factors should follow
- Of effort to capture milestones (risk, stay, leave, time)
- Leads to a contract of three pathways: unto the target score risk factors, consecutive wards, consecutive leave
- Describe the relation risk factor  $\leftrightarrow$  treatment module
- Relation risk factor  $\leftrightarrow$  learning situations in treatment ward

# Interventions

- Treatment focused on dynamic risk factors HKT-30 (V)
- Request supervised leave within a year (V)
- Request trial leave within 4 weeks after starting living in an institute or living on their own (V)
- Contract the three pathways in a treatment summary (S)
- Extension of the pathway dynamic risk factors (HKT-30) with the measureable protective factors SAPROF (C)
- Explicit the individual knowledge, come to consensus (C)
- Make explicit the relation between risk factors and treatment module/learning situations (C)
